

Concord School District Policy #530

Student Wellness

Concord School District recognizes that nutrition and physical education are essential components of the educational process. The District will create guidelines to encourage healthy choices for students that foster health and education.

The District recognizes the importance of proper nutrition and developmentally appropriate physical activity as ways of promoting healthy lifestyles, minimizing childhood obesity, and preventing other diet-related chronic diseases. The District recognizes that scientific research has identified a positive relationship among adequate nutrition, physical activity, and academic success. It is, therefore, the goal of the District that the learning environment should positively influence a student's understanding, beliefs and habits as they relate to good nutrition and physical activity to encourage healthy lifestyles and promote academic success.

The District shall teach, encourage, support and model healthy eating habits by providing a pleasant and safe eating area, a variety of nutritious foods that meet the USDA Dietary Guidelines, and an adequate amount of time for eating.

The District will provide a systemic K-12 Health and Physical Education program that integrates nutrition education that will teach, encourage, support and model age-appropriate daily physical activity so students will have opportunities to be physically active on a regular basis.

The District shall educate students and employees to the important benefits of a healthy lifestyle by providing a school environment before, during and after school hours that promotes and encourages all to make healthy food choices, develop healthy eating habits, and promotes opportunities for physical activity.

The District will involve students, parents, teachers and community partners in developing, implementing, monitoring and educating strategies about healthy eating and physical activity along with reviewing the Wellness Policy and guidelines.
